# Apache Load Balancer

## ⚖️ Apache Load Balancing Solutions

### Smart. Scalable. Stable.

**Distribute your website traffic like a pro — starting at just [₹2000 / $25](#)**

---

## 🟦 Why Choose Apache Load Balancing?

Is your website lagging during traffic spikes? Are you worried about downtime? Apache Load Balancing is the backbone of a stable, responsive online experience.

With our expert setup, you can:

- ▪ 🔹 Distribute incoming traffic across multiple servers
- ▪ 🔹 Reduce the risk of server crashes
- ▪ 🔹 Serve more users faster
- ▪ 🔹 Enable seamless growth and future upgrades

---

## 🛠 What We Offer

We implement advanced Apache Load Balancing configurations that match your traffic, tech stack, and goals.

## 🔧 Features You'll Love:

- ▪ mod_proxy_balancer configuration or Nginx/HAProxy with

Apache
- Round-robin / IP-hash / least-connection balancing
- SSL passthrough or termination at proxy
- Sticky sessions for login-based applications
- Health checks, automatic failover
- Optimized headers, caching, and compression support
- Optional real-time monitoring and alerts

---

# 📋 Our Plans

---

# 🗺️ Real-World Architecture Examples
# ⬜ 1. Basic Apache Load Balancing (2 Backends)

**Ideal for**: Small businesses, blogs, portfolios

```
            [ Internet Users ]
                    |
           [ Apache Proxy Server ]
                 /        \
        [Backend Server 1] [Backend Server 2]
```

⬜ **Example**: A photography portfolio site sees traffic during campaign promotions. With Apache, traffic is equally distributed between two backend PHP servers — preventing overload.

---

# ⬜ 2. SSL Load Balancing with Failover (Business Plan)

**Ideal for**: SaaS, Digital Agencies

```
            [ Internet Users ]
                    |
          [ Apache Proxy with SSL ]
               /    |    \
    [App Server 1] [App Server 2] [App Server 3]
             \___ Failover Node ___/
```
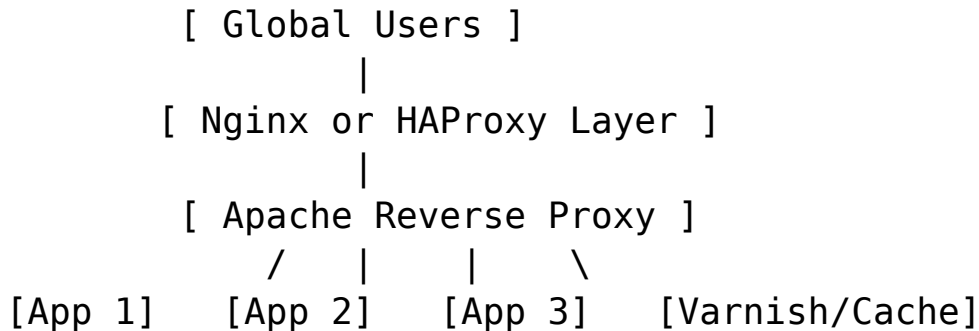

⬜ **Example**: A marketing SaaS platform with 5K daily users now has auto-failover. If one node fails, traffic reroutes automatically — without user disruption.

---

# ⬜ 3. Enterprise Architecture (Reverse

# Proxy + Cache)

**Ideal for**: High-volume eCommerce, apps, or global sites

```
          [ Global Users ]
                |
        [ Nginx or HAProxy Layer ]
                |
        [ Apache Reverse Proxy ]
          /   |    |    \
    [App 1]  [App 2]  [App 3]   [Varnish/Cache]
```

⬛ **Example**: A shopping app handles 1M+ monthly users. Nginx handles global load, Apache distributes internal traffic, and caching layer ensures super-fast load times.

# ⬜ Frequently Asked Questions (FAQs)

**Q: How do I know which plan to choose?**
We offer a free consultation to assess your current setup and suggest the right plan.

**Q: Do you support dynamic scaling?**
Yes! We can integrate auto-scaling for cloud or containerized environments.

**Q: Will SSL be affected?**
No, we preserve your SSL setup or terminate it securely at the proxy.

**Q: Can I monitor server load in real time?**
Yes, with our $15/month plan, you get live server health stats and downtime alerts.

**Q: Is HAProxy or Nginx better than Apache alone?**
For high-volume sites, yes. We can use Apache as a backend and

let Nginx/HAProxy handle smart routing upfront.

# ⬛ Frequently Asked Questions (FAQs)

**Q: What access do you need to fix Apache errors?**
A: We need SSH access with root or sudo privileges. You can revoke it once the work is done.

**Q: How fast will you fix the issue?**
A: Most fixes are completed within 24 hours from the time access is granted.

**Q: Will my website go down during the fix?**
A: We ensure minimum downtime. In most cases, we back up and test before applying final changes.

**Q: Do you offer a refund if the issue isn't resolved?**
A: Yes. If we can't fix the issue, you'll receive a full refund — no questions asked.

**Q: Is this a one-time service or recurring?**
A: This is a **one-time fix** per server for a single issue. If you want monthly monitoring, we offer that too.

**Q: Can you handle panel-based Apache setups like cPanel, Webmin, etc.?**
A: Yes, we support both panel-based and bare-metal (manual)

Apache installations.
