

NGINX Monitoring & Uptime Protection

☐ NGINX Monitoring & Uptime Protection – \$15/month/server

Proactive monitoring + alerts + expert eyes = Peace of mind

☐ What We Monitor

☐ NGINX Service Health

- Is nginx running or stopped?
- Auto-restart if it crashes
- Version check & upgrade alerts

☐ NGINX Error & Access Logs

- Monitor for spikes in:
 - 400, 403, 404, 429, 500, 502, 503, 504 errors
- Detect brute force, DDoS, and path scanning attempts

☐ HTTP & HTTPS Response Monitoring

- Uptime check every 1 minute
- Alert if site returns error or times out
- Check SSL certificate validity

☐ Traffic & Request Trends

- Requests per second (RPS)
- Sudden traffic spikes or drops
- Bots and crawlers tracking

☐ Resource Usage (NGINX Specific)

- Worker CPU & memory usage
- Number of active connections
- Connection queue length
- Keepalive sessions

☐ Security Monitoring

- Detect unauthorized access attempts
- Alert for suspicious user agents or IP patterns
- Rate limit violation detection

☐ Log File Size & Rotation

- Alert if logs grow too large
- Check for failed log rotation

☐☐ Included Support & Benefits

- ☐ Monthly performance & error summary report
- ☐☐ Immediate alert (Email/WhatsApp/Slack) on critical issues
- ☐ Auto-fix or manual fix option for common issues
- ☐ Security hardening tips (monthly review)
- ☐ Optional load test every quarter

- ☐ 24/7 human check available (upgrade option)
-
